Dear James

Company Feedback

AES recently remediated an 88,000m² site by excavating and stockpiling approximately 20,000m³ of asbestos impacted soils. As part of the remedial works AES was also responsible for the establishment and management of the associated asbestos soil stockpiling area.

It was critical that these works were delivered by a set date for the client, and AES completed all aspects of their scope successfully and on time. I found them to be professional, knowledgeable, dedicated and hardworking. Of particular note was their strict compliance with site specific management requirements and transparency of daily operations.

Yours sincerely
